## THE CIMRR RENHABLE AREA

 REPORT
## Sizing up downtown

Can the sizes of buildings change over time even though no new construction has taken place? Landlords of many buildings in Downtown Manhattan seem to think so, reporting growth spurts in building size ranging from less than a percent to more than 33 percent over the past 17 years.

To understand this phenomenon, CTRR tracked 50 randomly selected Class A and $B$ office buildings in the Downtown
market from 1990 through 2007. As reported by landlords, 32 percent-or 16 out of 50 -of these supposedly inanimate structures grew by more than 5 percent. This was true for buildings of all sizes and shapes. The seventh smallest building in the study, 5 Hanover Square with 320,000 square feet, ranked first in growth with a 33.82 percent increase in size since 1990. The largest property, 55 Water Street with 3.8 million square
feet, grew by 19.92 percent.
These findings are consistent with our 2006 Midtown study, in which 34 percent of buildings grew by more than 5 percent. All data on building size were taken from Office Buildings, published annually by Yale Robbins, Inc. and are based on information provided by building owners and managing agents.

## How re-measuring buildings affects costs for tenants

Landlords are completely within their rights to re-measure their space, and to offer it at whatever rentable area they see fit. The difference between rentable area and usable area is known as the loss factor for tenants, and it changes-often increasing-every time a landlord re-measures space. The loss factor is an entirely market-driven phenomenon, and it is well-established that the re-measurement of office buildings is widespread among building owners. The results of CTRR's new analysis demonstrate just how arbitrary and idiosyncratic rentable area can be.
Re-measuring is usually a strategy to increase building revenue without quoting a higher base rent in lease negotiations. Re-measuring can also be used in conjunction with a higher quoted base rent, allowing a landlord to double dip on rent increases. The 16 buildings our survey reports to have grown by more than 5 percent without physical basis may generate increased base rent of between $\$ 249,000$ and $\$ 28$ million per year as a result.

Over the course of 10 years-a typical lease term - the potential revenue growth is much greater. For instance, 55 Water Street, with a gain of almost 20 percent, could generate more than an estimated $\$ 284$ million. This calculation is based on lease rates currently reported for the property by CoStar Property, an independent database for commercial real estate.

In addition to inflated base rents, landlords may collect more through other charges that are billed on a dollar-per-square-foot basis. These charges may include certain types of electricity billings and other escalation fees.

Because the practice of re-measuring is so widespread, extrapolating to illustrate the consequences marketwide gives a sense of what's at stake for building owners and for tenants. The Downtown marketplace includes about 90 million square feet of office space. As reported by Colliers ABR, average asking rents Downtown were approximately $\$ 47.56$ at the end of 2007 . If 32 percent
of these Downtown owners re-measure their space to increase it by 8.52 percent (the weighted average rate of increase among those building owners reporting significant increases in building area during the last 17 years), and charge the prevailing average asking rent for this space, the additional annual base rent charges would be about $\$ 117$ million.

The Midtown/Midtown South market consists of about 352.2 million square feet of space. If 32 percent of Midtown property owners similarly re-measure their space to increase its size by 8.52 percent, and charge the average asking rent of $\$ 63.67$, the annual increase in base rent to Midtown/Midtown South building owners would be about $\$ 611$ million. Overall, Manhattan tenants would pay increased annual base rent of about $\$ 728$ million per year because of phantom building growth.

# Analysis of Growth in Randomly Selected Downtown Office Buildings

## Notes:

1. Estimated increase in annual base rent is based on rental rates reported by CoStar Property

Other revenues linked to rentable area, such as electricity and certain escalation charges, may also increase because of the deemed increase in rentable area.
2. Estimated increase in base rent over a 10-year lease, based on rental rates reported by CoStar Property

Other amounts billed to tenants based on rentable area, such as certain electricity and escalation charges may also increase because of the deemed increase in rentable area
3. Annual increase in base rent attributed to re-measured area is based on the reported rent figure in 1998, when MTA signed a 49 year lease.
4. Annual increase in base rent attributed to re-measured area is based on 2003 rent, the most recent direct rent figure available from CoStar
5. Annual increase in base rent attributed to re-measured area is based on 2000 rent, the most recent direct rent figure available from CoStar.
6. Gross Building Area data is from Yale Robbins, Office Buildings 1990 - Office Buildings 2007. Gross Building area is defined as the approximate total area of a building in square feet

For purposes of this analysis, Gross Building Area does not include non-rentable, non-tenantable areas such as garages.
7. Percent change from square footage reported in 1990.

## Measures tenants can take to limit their costs

Tenants can gird themselves when they go into the real estate market by knowing that rentable area is a purely relative term, linked more to economics than to a building's physical characteristics.
A well-advised tenant will compare rentable areas as they are offered by competing, alternative buildings, to help ensure that the tenant is positioned to negotiate the best available terms. A tenant may ask a landlord to report rentable area in terms of recognized standards - such as the Building Owners
and Managers Association (BOMA) or American National Standards Institute (ANSI) standards - for determining rentable area. To determine a reasonable value for rentable area, a tenant may also have an architect or other advisor make its own measurement of space in which the tenant is interested.

Keep in mind, however, that from a building owner's point of view, "rentable area" may be a non-negotiable factor in the rent equation. Making your own determination of rentable area may not sway the building owner, but
it is a necessary factor in developing an informed assessment about the space you choose to lease.
More important even than understanding rentable area may be focusing on usable area. When comparing competing alternatives for a new lease or a lease renewal, a tenant will be well insulated from all the vagaries of rentable area measurements by focusing on the usable area at competing buildings-regardless of quoted rentable are-and how much it will pay for the usable space at each location.

## Biggest Gainers in Reported Building Area
